

The background of the entire page is a detailed topographic map. The map features intricate contour lines in shades of blue and green, representing elevation and terrain. The lines are dense and complex, creating a textured, layered appearance. The overall color palette is muted, with various tones of blue, green, and yellow-green.

Keynote Speakers:

Elisa Silva is the director and founder of Enlace Arquitectura, (est. 2007) a multidisciplinary professional practice in architecture, urban design and landscape architecture, and Enlace Foundation (est. 2017), an NGO that promotes environmental, cultural and educational programs of social inclusion and participatory design collaborations. Enlace's work has been recognized in numerous design competitions, exhibitions and international biennials including the IX Iberoamerican design biennial 2024 Design and Public Action Award, Biennale di Venezia 2021, Chicago Architecture Biennial 2021, Arc en Rêve centre d'architecture in Bordeaux 2022, Centro Cultural Parque de España in Rosario Argentina 2022, the XI and VII Ibero American Architecture and Urban Design Biennial and the X Architecture Biennial in Chile. Elisa is the recipient of the Rome Prize, the Wheelright Fellowship, the Lucas Artist residency and the Afield Fellowship.

American-Venezuelan architect, with a Master of Architecture from Harvard GSD, Elisa's practice and research challenge prejudiced narratives that support spatial inequality and mine resources to improve livelihoods and environments in territories such as self-built neighborhoods, the polluted Guaire River in Caracas Venezuela, and communal rural landscapes in Oaxaca Mexico. Elisa is the author of seminal publications on barrios and public space including CABA Cartography of the Caracas Barrios (FE 2015) and Pure Space: expanding the public sphere through public space transformations in Latin-American spontaneous settlements (Actar 2020). She is Associate Professor at Florida International University FIU and has also taught at Harvard University, Princeton University School of Architecture, the Daniels Faculty of Architecture, Landscape Architecture and Design at the University of Toronto, the Universidad Central de Venezuela and the Simón Bolívar University.

Paola Viganò architect and urbanist is Full Professor in Urban Theory and Urban Design at the EPFL (CH) where she directs the Habitat Research Center (HRC) and the Laboratory of Urbanism (Lab-U); she is also Professor at IUAV University of Venice (IT). She was the first woman to receive the Grand Prix de l'Urbanisme in France (2013), she is Doctor Honoris Causa by the UCLouvain in 2016 in the frame of "Utopia for our Time" and received the Flemish Culture Award for Architecture in 2017, and the Golden Medal for the Career of Milano Triennale in 2018. In 2022, she was appointed the Schelling Prize for Architectural Theory. In 2025, she received the Brussels Architecture Prize "Lifetime achievement Award". Together with Bernardo Secchi, she founded Studio (1990-2014) and later Studio Paola Viganò working on numerous projects and visions in Europe, including the Great Paris vision (published in *La ville poreuse*, 2011) and the Antwerp Structural plan (published in *Territories of a New Modernity*, 2006). In 2025 Studio Paola Viganò has been awarded with the Brussels Architecture Prize for Public Spaces. Her recent projects deal with urban and territorial design and the design of public space. *The Biopolitical Garden. Space, Life, Transition* (Actar 2024) is her latest book.

Since 2015, StudioPaolaViganò works on the ecological and social transition of cities, landscapes and territories designing urban and territorial projects and realizing public spaces in Europe as the new public park in Dessel Nuclear Research center (Belgium), or Marie Janson Plein in Brussels, together with VVV. Studio has also won the competition for the realization of the municipal plan (PdCom) of Lugano (Switzerland), just completed and is consultant of the City of Geneva for its municipal plan (PdCom). Studio is finally coordinating the Strategic Scheme for the recovery of the Vesdre Valley (Belgium) after the flooding catastrophe of 2021 summer. In 2019, her work has been exhibited at the Shenzhen Biennale and in 2021 at the Venice Biennale. In 2022, she receives the Schelling Prize for Architectural Theory.

Rúi is a visual artist whose art focuses on the humankind and its relation to the Earth and the Cosmos. Since 1999 many of her works raise questions about water, shortage of safe water for consumption, but also the possible effects of icecaps melting on shorelines of continents and countries. These works are based on scientific information. Her works have been exhibited widely around the world. Rúi has received a number of awards for her art, and was recently awarded the Icelandic Visual Arts Council's Honorary Award 2026.

Over a career spanning more than five decades, Rúi, has centered her artistic practice on moral and existential questions that confront inhumanity, imperialism, capitalism, social injustice, and environmental destruction. A pioneer of performance art in Iceland, she has worked across a wide range of media including painting, sculpture, photography, film, multimedia installation, writing, and performance. Her groundbreaking performance *Golden Car* (1974) was among the first works in Iceland to engage explicitly with political activism. She represented Iceland at the 2003 Venice Biennale with *Archive – Endangered Waters*, an interactive multimedia installation presenting visual and acoustic data from 52 waterfalls threatened by dam construction in the Icelandic Highlands — a work that brought her international recognition.

FUTURE CARTOGRAPHIES: Rúrí and Elena Mazzi

Galleri Verkligheten. Pilgatan 16 Umeå

Future Cartographies investigates the condition of complexity and rapidly transformation of geographies within and beyond the arctic. It is a dialogue between the work of two artists, Rúrí and Elena Mazzi, engaging with spatial research through artistic practice. Their approaches intersect art and architecture as a spatial science as a way of reading and interpreting territorial changes. The cartographies are conceived as a critical lens for understanding infrastructures, territories, and resource extraction systems, a spatial tool envisioning new narratives through documentation, data interpretation, and visual translations.

The exhibition is organized in collaboration with UmArts research centre and Galleri Verkligheten, and curated by Maria Luna Nobile as one of the contribute of the EURAU26 LATITUDES Symposium
